Work Experience

ANTHROP\C — Privacy Infrastructure

San Francisco, CA

Member of Technical Staff — *September 2025 — Present*

- Building data governance and privacy infrastructure used across Anthropic's products
- Supporting privacy work for a wide range of internal systems, partnering with teams across the company

ByteDance — Global Payments Security and Privacy Team

San Jose, CA

Senior Software Engineer — *March 2024 — September 2025*

- Detected abusive automated behavior such as account takeover and payment fraud
- Protected payments APIs from web attacks and DDoS
- Wrote backend services using **Golang**, **Redis**, **MySQL**, **Kafka**
- Built an internal Inventory System to track metadata for all Payments APIs
- Built a rule engine platform at the API Gateway layer to intercept all payment transactions

BLOCK — Privacy Engineering

San Francisco, CA

Staff Software Engineer — *May 2022 — March 2024*

- Led the Consent Management Framework at Block, building cookie consent solutions across both Web and Mobile
- Worked on in house data deletion and export systems for privacy compliance
- Primarily using **Java**, **MySQL**, **Datadog**, **AWS**, **Snowflake**, **Terraform**
- Acted as an adhoc privacy analyst, surfacing and mitigating privacy concerns for Cash Contacts
- Created long term strategy for purpose based data classification and asset inventory

Meta — Privacy Infrastructure & Messenger Privacy

Menlo Park, CA

Senior Software Engineer — *August 2017 — May 2022*

- Detected and mitigated large scale scraping attacks on Facebook and Instagram
- Built systems to observe, classify, and mitigate botted activity, engineering features from attacker signals
- Built infrastructure to make Messenger clients more secure and compliant with privacy regulations
- Created a differential privacy focused logging framework for both server and **iOS** client
- Built a real time engine to surface consent flows on mobile clients
- Part of the **Privacy IMOC** oncall rotation, coordinating the company's response to privacy incidents and postmortem reviews
- Primarily using **Haskell**, **Hack**, **C**, and **Python**

Internships

Software Engineering Intern — *2014 — 2016*

Meta	**Ads Signals** Real time conversion aggregations in C++, Hack, thrift and React	*Summer 2016*
Meta	**Ads Infrastructure** Real time C++ storage for object delivery, 30% leaner HDFS storage	*Fall 2015*
Google	**YouTube Infrastructure** Migrated the V3 API from Java to Python, safer video fetches	*Summer 2015*
Viasat	**Satellite Internet Analytics** Page load metrics: Firefox extension, Flask, ElasticSearch	*Summer 2014*

Projects

Saber: Delegating Web Security to Browser

(Paper)

Graduate Researcher

- Created a prototype **Fetch API** that delegates web requests to Google Chrome
- Provide secure **TLS** connections to client applications without requiring any security expertise
- Also provide **strict transport security**, **public-key pinning**, and **revocation checking** for free

SPAM: Secure PAckage Manager

(Paper)

Graduate Researcher

- Created a framework for package management using a federated Byzantine fault tolerant system
- Provide strong security guarantees against malicious developers, registries, and integration services
- Tied developer keys with online identities to build a federated trust network through endorsements

Multiplayer Brawler

(Project)

Game Developer

- Created a 3D online multiplayer brawler in **C++**
- Built network engine using **Boost Asio**, server-client communication using **Google protobufs**, and physics engine using **Bullet**

Education

BS/MS in Computer Science

San Diego, CA

University of California, San Diego

2012 — 2017

- **Relevant Coursework—** Software Engineering, Computer Security, Programming Language Theory, Compiler Theory, Operating Systems and Networking, Cryptography, Networked and Distributed Systems
- **Thesis—** Analyzing and addressing the security issues of non-browser web-connected applications

Teaching Assistant

San Diego, CA

University of California, San Diego

2016 — 2017

- **Intro to Computer Security—**Control flow hijacking, MITM attacks, XSS, CSRF, JIT Spraying, SSL stripping, privacy
- **Programming Language Theory—**Haskell, lambda calculus, type inference, monads
